

Create Effective Social Distancing Policies at Work with Proxxi Contact

Introducing Proxxi Contact – support for safe re-opening

The Proxxi Contact solution is a complete system of wearable wristbands, data recording and collection support, and comprehensive reporting tools with built-in privacy and security.

Easy to distribute wristbands

Your Proxxi Contact deployment starts with wristbands that briefly vibrate and flash to notify wearers that another wristband is within 6 feet (2 meters). It reminds wearers of the need to maintain a healthy distance away from a coworker, even when the wearer is focused on tasks.

Using accurate data for contact tracing

Each time a Proxxi Contact wristband comes within range of another Proxxi Contact wristband, both store a record of that contact event. In the case a staff member shows concerning symptoms of illness, you can use this data to perform accurate contact tracing of that person's recent interactions and take appropriate measures.

Active safety that is easy to use

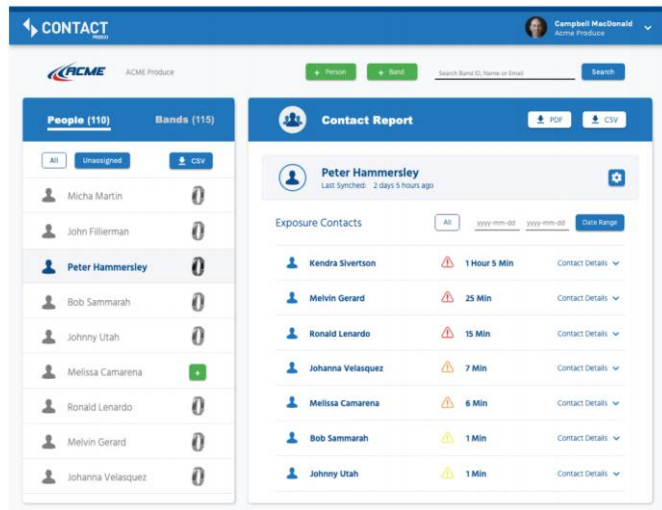

- Interaction data recorded on the wristband includes the distance and contact time, which enables understanding of risk profiles.
- A reporting dashboard provides an overview of wristband usage for insight into distribution and compliance.
- An available REST API allows detailed data export for additional processing and integration.
- Proxxi Contact wristbands store interaction data for at least 30 days, which can be retrieved as needed.
- Wristbands have a comprehensive [1-year warranty](#).

Interactive reporting

Once data is retrieved from the wristbands, managers can use the Proxxi Contact Reporting Dashboard to view reports about which wristbands have been in contact when, how many times, and for how long.

In the case of concerning symptoms, managers can use this data internally for further investigation or self-isolation procedures.

Interaction event logs can easily be downloaded to a CSV or Excel file for further analysis.

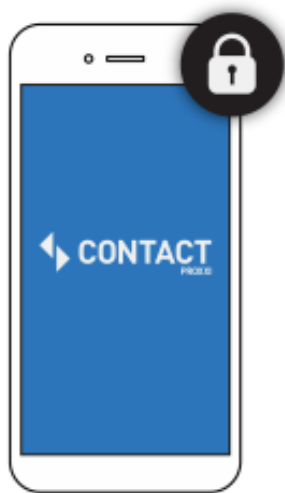

Your employees' data is secure

Managers collect interaction data from each wristband using the Proxxi Contact Mobile App, which is transferred directly to a secure cloud storage. To support individuals' privacy, interaction data cannot be seen by the person collecting it. It is only available to authorized managers within the dashboard.

For added security, Proxxi Contact wristbands do not record or share any personally identifiable information. They also do not track the wearer's location.

Your organization can manage your own personal data or you can let Proxxi manage the data. When your organization manages the data, it is responsible for the data's security. When Proxxi manages the data, we only manage what you choose to share and we store the data in a GDPR-compliant stack powered by Amazon Web Services.

Product specifications

Power

Charging: USB Port Type-A
Charging Time: 1-2 hours
Working Time: 10-12 hours
Battery Type: Polymer Lithium Battery

Certifications

RoHS
CE
FCC
REACH

Mechanical

IP Rating: Waterproof IP68
Weight: 23.5g
Band Material: TPU

Environmental

Operating Temperature: -20C to 40C
Operating Humidity: 10% - 90% RH
Storage Temperature: 0C to 50C
Storage Humidity: 5% - 90% RH

Connection

Bluetooth BLE 4.0

Mobile App

iOS 13 or newer
